Hi-fi News & Record Review 1996

EDN 2009

The EDN Designer's Companion Ian Hickman 1994 'You will most certainly find answers to some of your toughest design problems between the covers of this volume' Steven H Leibson, Editor in Chief, EDN Magazine. Since its first appearance in 1956, EDN has established itself as the clear leader in the provision of electronics information, with a combined circulation in the USA, Europe and Asia of over 150,000 copies every fortnight. This is an annotated, indexed and cross referenced collection of work from the magazine for electronic designers. A collected volume of the best articles from the extensive files of Ian Hickman was published in 1991. The articles provide a wealth of information on components, equipment, circuits, systems and standards that prove to be extremely popular and useful for practising electronics engineers. This second volume of collected articles includes subjects not covered in the first, and more recent items, to provide a completely up-to-date compilation, covering subjects including analog and digital circuits, test and measurement, software and algorithms. The articles are cross-referenced and indexed for ease of use. Many of the circuits are from the popular 'design ideas' section where readers submit their own designs. Longer review articles written by the magazine staff are also included.

*Modern Developments and Applications in Microbeam Analysis* Glyn Love 2012-12-06 This supplement of Mikrochimica Acta contains selected papers from the Fifth Workshop of the European Microbeam Analysis Society (EMAS) on "Modern Developments and Applications in Microbeam Analysis" which took place from the 11 to 15 May 1997 in Torquay (UK). EMAS was founded in 1986 by scientists from many European countries in order to stimulate research in microbeam analysis and into its development and application. The society now has over 350

members from more than 20 countries. An important EMAS activity is the organisation of biennial workshops which focus upon the current status and developing trends in microanalytical techniques. For this meeting EMAS chose to invite speakers on the following subjects: Standardless analysis, EPMA techniques for quantitative near-surface analysis and depth profiling, Matrix corrections in Auger electron and X-ray photon spectroscopy, X-ray analysis and imaging using low voltage beams, Scanning probe and near field microscopies, EPMA of frozen biological bulk samples, Environmental SEM and X-ray microanalysis of biological materials, Quantitative elemental mapping of X-ray radiographs by factorial correspondence, X-ray spectrum processing and multivariate analysis, Thin film analysis and chemical mapping in the analytical electron microscope, Wavelength dispersive X-ray spectroscopy, High resolution non dispersive X-ray spectroscopy with state-of-the-art silicon detectors and Recent developments in instrumentation for X-ray analysis. These invited lectures were given by eminent scientists from Europe, the USA, and Australia In addition to the introductory lectures there were poster sessions at which some 110 posters were on display.

**Print and Electronic Text Convergence** Bill Cope 2001 With the progressive digitisation of the book production processes, we see the emergence of a potentially potent mix of new technologies. Not potent because these technologies are capable of driving change alone, but potent for the commercial and cultural drivers which may work in concert with new technologies to transform the world of books and reading. Central to these technological developments is the convergence of the technologies of e-text and digital print. This book examines recent technological changes in book production. Our focus is in part on

technological actuality, centred mostly on the digitisation of text and its consequences. Our focus is also on the realm of possibility. Where might these technological shifts lead us? What are the commercial and cultural conditions under which technological possibility might bear fruits?

Within this volume we look specifically at the changing definition of a 'book'. A book is no longer a tangible thing; a book is what a book does. It is information architecture. We examine the various manifestations of electronic book readers and imminent technologies, such as electronic ink, including case study on the use of ebook reading devices by a lending library, and speculate about other uses of such devices. We see the convergence of print and etext - manifestations of the same thing - electronically stored text, with the difference demonstrated only in the shift in mindset necessary to accommodate emergent forms of digital text - as information services within a product-service system, the changing shape of digital design and changes in printing technologies from letterpress to the rise of digital printing.

*Modern Diagnostic X-Ray Sources* Rolf Behling 2021-04-19 Now fully updated, the second edition of *Modern Diagnostic X-Ray Sources: Technology, Manufacturing, Reliability* gives an up-to-date summary of X-ray source technology and design for applications in modern diagnostic medical imaging. It lays a sound groundwork for education and advanced training in the physics of X-ray production, X-ray interactions with matter, and imaging modalities and assesses their prospects. The book begins with a comprehensive and easy-to-read historical overview of X-ray tube and generator development, including key achievements leading up to the current technological and economic state of the field. The book covers the physics of X-ray generation, including the process of constructing X-ray source devices. The stand-alone chapters can be read in order or in selections. They take you inside diagnostic X-ray tubes, illustrating their design, functions, metrics for validation, and interfaces. The detailed descriptions enable objective comparison and benchmarking. This detailed presentation of X-ray tube creation and functions enables you to understand how to optimize tube efficiency,

particularly with consideration for economics and environmental care. It also simplifies faultfinding. Along with covering the past and current state of the field, the book assesses the future regarding developing new X-ray sources that can enhance performance and yield greater benefits to the scientific community and to the public. After heading international R&D, marketing and advanced development for X-ray sources with Philips, and working in the X-ray industry for more than four decades, Rolf Behling retired in 2020 and is now the owner of the consulting firm XtraininX, Germany. He holds numerous patents and is continuously publishing, consulting and training.

**Radiation Dose from Multidetector CT** Denis Tack 2012-06-05

Computed tomography (CT) is a powerful technique providing precise and confident diagnoses. The burgeoning use of CT has resulted in an exponential increase in collective radiation dose to the population. Despite investigations supporting the use of lower radiation doses, surveys highlight the lack of proper understanding of CT parameters that affect radiation dose. Dynamic advances in CT technology also make it important to explain the latest dose-saving strategies in an easy-to-comprehend manner. This book aims to review all aspects of the radiation dose from CT and to provide simple rules and tricks for radiologists and radiographers that will assist in the appropriate use of CT technique. The second edition includes a number of new chapters on the most up-to-date strategies and technologies for radiation dose reduction while updating the outstanding contents of the first edition. Vendor perspectives are included, and an online image gallery will also be available to readers.

Index of Crystallographic Supplies Reuben Rudman 2012-12-06 This is

the third edition of the Index of Crystallographic Supplies prepared on behalf of the International Union of Crystallography by its Commission on Crystallographic Apparatus. The first was compiled by Professor A. Guinier in 1956 and the second under the editorship of Dr. A. J. Rose in 1959. At that time, it was intended that publication of revised editions of the Index should be a continuing project of succeeding Commissions. However, with changing membership and other pressing activities, the preparation of the third edition has been dependent on the acquisition of a Commission member with appropriate experience and enthusiasm. The Commission is therefore fortunate that Professor R. Rudman, who has had considerable experience in the collation of information on crystallographic matters, has undertaken this task. He has been assisted by the advice of the members of the 1969-72 Commission, in particular that of a group which, during a meeting in Marseille, France, July 4-6, 1971 to discuss Commission affairs, went over the draft of the Index in

close detail. These included S. C. Abrahams, U. W. Arndt and D. M. Kheiker. The information included in the Index was gathered from replies to a questionnaire which was sent to a wide range of manufacturers and suppliers throughout the world. It is not intended as complete and exhaustive but it should provide a convenient starting point for the location of the appropriate sources of equipment and materials of use to crystallographers.
