**Protected Area Governance and Management** Graeme L. Worboys 2015-04-08 Protected Area Governance and Management presents a compendium of original text, case studies and examples from across the world, by drawing on the literature, and on the knowledge and experience of those involved in protected areas. The book synthesises current knowledge and cutting-edge thinking from the diverse branches of practice and learning relevant to protected area governance and management. It is intended as an investment in the skills and competencies of people and consequently, the effective governance and management of protected areas for which they are responsible, now and into the future. The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term, and organisations such as International Union for the Conservation of Nature are a unifying force in this regard.

Nonetheless, protected areas are a socio-political phenomenon and the ways that nations understand, govern and manage them is always open to contest and debate. The book aims to enlighten, educate and above all to challenge readers to think deeply about protected areas—their future and their past, as well as their present. The book has been compiled by 169 authors and deals with all aspects of protected area governance and management. It provides information to support capacity development training of protected area field officers, managers in charge and executive level managers.

**Twentieth-Century Lutheran Theologians** Mark C. Mattes 2013-08-14 This collection of essays examines important twentieth-century Lutheran theologians, including European and North American voices. Each essay provides an overview of the life and thought of important confessional Lutherans who shaped theology with an ecumenical, world-wide impact. The focus here is not on later twentieth-century figures but earlier ones, selected similar to the spirit manifest in Karl Barth's contention »lest we forget where contemporary theology came from« (Protestant Theology From Rousseau to Ritschl). The essays composed over the last five years were initiated by Lutheran Quarterly in order to assess our recent past as we move into a new millennium. The goal of each author, each a leading theologian, has been to describe each thinker's life and vocation and how each thinker's work continues to impact theology today.

**The SAGE Handbook of Criminological Research Methods** David Gadd 2011-10-19 Conducting research into crime and criminal justice carries unique challenges. This Handbook focuses on the application of 'methods' to address the core substantive questions that currently motivate contemporary criminological research. It maps a canon of methods that are more elaborated than in most other fields of social science, and the intellectual terrain of research problems with which criminologists are routinely confronted. Drawing on exemplary studies, chapters in each section illustrate the techniques (qualitative and quantitative) that are commonly applied in empirical studies, as well as the logic of criminological enquiry. Organized into five sections, each prefaced by an editorial introduction, the Handbook covers: • Crime and Criminals • Contextualizing Crimes in Space and Time: Networks, Communities and Culture • Perceptual Dimensions of Crime • Criminal Justice Systems: Organizations and Institutions • Preventing Crime and Improving Justice Edited by leaders in the field of criminological research, and with contributions from internationally renowned experts, The SAGE Handbook of Criminological Research Methods is set to become the definitive resource for postgraduates, researchers and academics in criminology, criminal justice, policing, law, and sociology. David Gadd is Professor of Criminology at Manchester University School of Law where he is also Director of the Centre for Criminology and Criminal Justice. Susanne Karstedt has a Chair in Criminology and Criminological Justice at the University of Leeds. Steven F. Messner is Distinguished Teaching Professor of Sociology, University at Albany, State University of New York.

**Research for the Psychotherapist** Jay Lebow 2013-08-21 While empirical, scientific research has much to offer to the practice-oriented therapist in training, it is often difficult to effectively engage the trainee, beginning practitioner, or graduate student in a subject area that can often glaze over the eyes of a reader focused on practical work. Most books about psychotherapy focus either on the process of gathering, analyzing, presenting, and discussing research results, or on conducting clinical work. What most of these texts lack is an engaging, accessible guide on how to incorporate research into practice. Research for the Psychotherapist: From Science to Practice fills that niche with an approach that bridges the gap between research and practice, presenting concise chapters that distill research findings and clearly apply them to practical issues. Jay Lebow is an accomplished practitioner and researcher in the fields of marriage and family therapy and integrative psychotherapy. In this book, he offers a focused volume that covers a range of topics. This volume should appeal to psychotherapists and students looking for an accessible, jargon-free guide to utilizing research in practical settings.

*Collected Works of Charlotte Wolff* Charlotte Wolff 2021-03-04 Charlotte Wolff (1897-1986) was born in Riesenburg, West Prussia (now Prabuty, Poland) into a middle-class Jewish family. She studied philosophy and then medicine at several German universities, completing her doctorate in Berlin in 1926. Working in various institutions over the next few years, she was also interested in psychotherapy and had a small private medical and psychotherapeutic practice. In 1933 she was forced to leave Germany because of the Nazi regime, and settled for a few years in Paris. As a German refugee she was unable to practice medicine, so she began her research into the correlation between hand traits and personality. In 1936 she went to London to continue her research work and lived there until her death. An active lesbian from an early age, her later research turned to sexology and her writing on lesbianism and bisexuality were

influential early works in the field. This is a great opportunity to rediscover her early work, including her first autobiography.

*The Persians* Geoffrey Parker 2016-11-15 During the first and second millennia BCE a swathe of nomadic peoples migrated outward from Central Asia into the Eurasian periphery. One group of these people would find themselves encamped in an unpromising, arid region just south of the Caspian Sea. From these modest and uncertain beginnings, they would go on to form one of the most powerful empires in history: the Persian Empire. In this book, Geoffrey and Brenda Parker tell the captivating story of this ancient civilization and its enduring legacy to the world. The authors examine the unique features of Persian life and trace their influence throughout the centuries. They examine the environmental difficulties the early Persians encountered and how, in overcoming them, they were able to develop a unique culture that would culminate in the massive, first empire, the Achaemenid Empire. Extending their influence into the maritime west, they fought the Greeks for mastery of the eastern Mediterranean—one of the most significant geopolitical contests of the ancient world. And the authors paint vivid portraits of Persian cities and their spectacular achievements: intricate and far-reaching roadways, an astonishing irrigation system that created desert paradises, and, above all, an extraordinary reflection of the diverse peoples that inhabited them. Informed and original, this is a history of an incomparable culture whose influence can still be seen, millennia later, in modern-day Iran and the wider Middle East.

**EMPOWERING GURUS** Sumathi Kulkarni 2020-10-12 As the title reflects, this non-fiction book penned by Sumathi Kulkarni is an expression of thoughts and ideas mirroring the environment and our experiences. They are universal in nature and represent an outpouring of emotions, thoughts, facts and sensitivities at different levels. The author talks about simplicity of children and education in contrast to the present complex system that complicates a child's mind. She also reflects the practical importance of English as a global language. The idea is to empower teachers frequently with introduction of skills through workshops as reinforcement as well as strengthen and refine the skills of the teacher community.

*Planetary Cartography and GIS* Henrik Hargitai 2019-02-22 This book approaches geological, geomorphological and topographical mapping from the point in the workflow at which science-ready datasets are available. Though there have been many individual projects on dynamic maps and online GISs, in which coding and data processing are given precedence over cartographic principles, cartography is more than “just” processing and displaying spatial data. However, there are currently no textbooks on this rapidly changing field, and methods tend to be shared informally. Addressing this gap in the literature, the respective chapters outline many topics pertaining to cartography and mapping such as the role and definition of planetary cartography and (vs?) Geographic Information Science; theoretical background and practical methodologies in geological mapping; science-ready versus public-ready products; a goal/procedure-focused practical manual of the most commonly used software in planetary mapping, which includes generic (ArcGIS and its extensions, JMARS) and specific tools (HiView, Cratertools etc.); extracting topographic information from images; thematic mapping: climate; geophysics; surface modeling; change detection; landing site selection; shared maps; dynamic maps on the web; planetary GIS interfaces; crowdsourcing; crater counting techniques; irregular bodies; geological unit symbology; mapping center activities; and web services. All chapters were prepared by authors who have actually produced geological maps or GISs for NASA / the USGS, DLR, ESA or MIIGAİK. Taken together, they offer an excellent resource for all planetary scientists whose research depends on mapping, and for students of astrogeology.

*Handbook of Research on Engineering Education in a Global Context* Smirnova, Elena V. 2018-08-31 Engineering education methods and standards are important features of engineering programs that should be carefully designed both to provide students and stakeholders with valuable, active, integrated learning experiences, and to provide a vehicle for assessing program outcomes. With the driving force of the globalization of the engineering profession, standards should be developed for mutual recognition of engineering education across the world, but it is proving difficult to achieve. The Handbook of Research on Engineering Education in a Global Context provides innovative insights into the importance of quality training and preparation for engineering students. It explores the common and current problems encountered in areas such as quality and standards, management information systems, innovation and enhanced learning technologies in education, as well as the challenges of employability, entrepreneurship, and diversity. This publication is vital reference source for science and engineering educators, engineering professionals, and educational administrators interested in topics centered on the education of students in the field of engineering.

*Neoliberalism and the Global Restructuring of Knowledge and Education* Steven C. Ward 2012-04-05 This book examines the influence of neoliberal ideas and practices on the way knowledge has been conceptualized, produced, and disseminated over the last few decades at different levels of public education and in various national contexts around the world.

**Research Concepts for Management Studies** Alan Berkeley Thomas 2006-09-27 By its very nature, management is a multidisciplinary enterprise. Despite this, management research has tended to be organized around a number of discrete management disciplines with their own methodological outlooks. As a result, researchers in different fields often find it difficult to appreciate work outside their own area of specialization, so inhibiting much-needed collaboration across disciplinary boundaries. Management has emerged as a major area of research that has attracted students in growing numbers. However, there are still relatively few texts that are tailored specifically to the needs and interests of management researchers. Together with its companion volume, Research Skills for Management Studies (Routledge, 2003), this book offers management students a challenging but accessible introduction to research methods and concepts, irrespective of their field of specialization.

*Ingardeniana III* Anna-Teresa Tymieniecka 2012-12-06 In the footsteps of Ingardeniana II, this volume marks the 20th anniversary of Roman Ingarden's death, partly focusing upon his thought, partly bringing his aesthetics into the present-day framework of research. It might have appeared puzzling to the followers of our Analecta Husserliana why within the original horizon encircled by the research work of our International Society of Phenomenology and Literatur- whose research work is devised in a diametrically opposed direction to that of Roman Ingarden - there is steadfastly running through our discussions a line of Ingardenian reflection. The reason, as I have pointed out in the introduction to Ingardeniana II, expertly edited by Hans Rudnik, is clear: Ingarden's analysis of the intentional structures of works of art offers in its distinct and clear-cut forms an 'objective' correlate - as well as a point of reference - to the vast conundrum of issues concerning the creative endeavor of the writer, poet, artist in their struggle to endow life with its specifically human significance; a conundrum that in our research we are trying to disentangle- elucidating its mysterious ramifications, their sources and dynamic virtualities. As a matter of fact, Ingarden's thought, newly interpreted and originally expanded, occupies a legitimate place in the present collection. We find here, in the first place, an original expansion of Ingarden's aesthetic theory in the monograph of Iadwiga Smith followed by the essays of Wadaw Osadnik, Yushiro Takei and Charles Rzepka.

**Essentials of Scientific Writing** Joseph Mughah 2016-12-13 Essentials of Scientific Writing: How to Write Effective Titles and Abstracts for Research Papers and Proposals is a belated entrant into a vast and crucially important area with scarce reference materials. This scarcity manifested itself as I searched what I had expected would be useful source materials for the present book. I skimmed through many textbooks on scientific writing and editing, articles on the Internet, and notes from courses on scientific writing. They all turned out to be manifestly wanting in both depth and scope. None extended beyond two pages, and most were hardly a page long, so they were largely useless for my purposes. To the authors' knowledge, few published books treat the subjects of Titles and Abstracts in the kind of detail presented in this book. Accordingly, in developing the book, the author hoped to fill a void in the crucial area of facilitating sharing of knowledge and information from research work. It is my hope that everyone writing scientific work will endeavor to find space for the book on their shelves and will place it within arms length whenever they are writing or editing the title or abstract.

This innovative text covers topic areas in a traditional sequence but gently shifts the focus to an alternative approach using estimation, emphasizing confidence intervals, effect sizes, and practical significance, with the advantages naturally emerging in the process. Frequent opportunities for practice and step-by-step instructions for using Excel, SPSS, and R in appendices will help readers come away with a better understanding of statistics that will allow them to more effectively evaluate published research and undertake meaningful research of their own.
